## Grapefruit Seed Extract

From the seed of the grapefruit comes an effective and potent natural antibiotic. Grapefruit seed extract has been used by naturopathic physicians for over twenty years for internal and external treatment of infections caused by parasites, viruses, bacteria, fungus and more. Grapefruit seed extract has been tested and found to be as effective as antibiotics in treating certain bacteria and fungus with no side effects.

Grapefruit seed extract contains strong polyphenols known as Quaternary ammonium compounds.

This compound has an antimicrobial effect and attacks the cytoplasmic membrane of a microorganism thereby making it unable to function properly. Grapefruit seed extract is effective and safe with no known toxicity and no impact to human intestinal bacteria.

This material has not been evaluated by the FDA. Immunity Shots are not intended to diagnose, cure or prevent any disease. If you are sick, seek advice from your doctor or other qualified medical professional.
